# How ONLYOFFICE integrated with Jalios helps Accoord to organize learning activities

In this use case, we will show you how Accoord deployed a secure collaborative environment based on Jalios and ONLYOFFICE Docs to help its distributed teams communicate and be more productive.

## About Accoord

Accoord is an education association created in 1985. Based in Nantes, Accoord manages 29 leisure-time centers for children, 17 activity spaces for teenagers (11/15 years), and 20 socio-cultural centers. Accoord also offers student mobility opportunities with 50 exchange programs in France and abroad.

Accoord has 850 permanent employees and over 1,100 employees during peak periods.

## Why choose ONLYOFFICE Docs

Accoord has 2 data centers and over 60 offices. To manage the distributed team, the association deployed collaborative intranet based on Jalios. It is available for both internal and external users. However, the main needs, which have grown during pandemic, were still not fully covered:

- sharing documents online with internal and external users;
- gathering around the same document to discuss all necessary adjustments and make real-time changes;
- centralizing data in secure spaces and keeping full control over them.

To tackle these concerns, Accoord conducted a comparative study of web-based collaborative solutions. The ONLYOFFICE suite proved to be more convenient for the following reasons :

- intuitive user interface,
- high compatibility with the formats of existing files,
- transparent pricing model,
- smooth integration with Jalios which is widely used by employees.

## Implementing ONLYOFFICE

To explore all available features, Accoord launched ONLYOFFICE Workspace in the cloud for 44 users.

After a test phase, they switched to ONLYOFFICE Docs and integrated the suite into the existing Jalios environment. Now, Accoord's employees can work on documents right inside their collaborative intranet.

# First positive results

The Accoord team started trying ONLYOFFICE Workspace during a quarantine period. Remote users highly appreciated task management tools and a knowledge base.

As for online editors, managing different versions of a document and reviewing remain the most popular features, and XLSX is the most widely used file format.

Vincent Corrèze, CIO at Accoord, explains:

*"With over 60 locations throughout the region of Nantes and the shift to remote work, the need for management and coordination became crucial for us. Thanks to ONLYOFFICE, we found an easy-to-deploy solution that allows transparently sharing information. As a result, we had a significant increase in performance: now we don't need to send documents by mail having multiple copies on different computers."*

For now, the integration ONLYOFFICE-Jalios is fully operational with 800 active accounts. What's more, employees are migrating to ONLYOFFICE Desktop editors to work with local files on their computers.
